## Introducing the Benchtop Vibration Table

The TCB-1.3 benchtop vibration table is ideal for reliability testing of compact products and electronics. It may be used as a stand-alone vibration table for vibration testing or placed inside an environmental chamber for combined vibration & temperature testing offering flexibility and greater return on investment.

Equipped with an all-axis vibration system, the TCB-1.3 utilizes four pneumatically-actuated vibration hammers providing 6 dof, random vibration with x,y,z axis and roll, pitch and yaw rotation. The chamber comes standard with two accelerometers, one for control and one vibration monitor with a range of 1 to 60 GRMs.

### Providing a full range of environmental chambers:

- Temperature/ Humidity
- Stability Chambers
- HALT & HASS
- Thermal Shock
- Altitude
- AGREE Vibration

**Contract Testing Services**

Buy a Chamber and while you wait receive 20% off the same type of testing in our Test Laboratory while your chamber is being built!

- Temperature
- Humidity
- Vibration
- Shock
- HALT & HASS
- Altitude
- Salt Spray/Corrosion
